报告题目:

**MIP solvers and benchmarking, or
how to produce good looking results**

邀请人: 袁亚湘研究员

报告时间: 2008年4月18日(周五)

上午 10:00—11:00

报告地点: 科技综合楼三层 311

计算数学所报告厅

Abstract:

SCIP is at the moment one of the best performing MIP solvers with freely available source code for academic use.

In this talk the current status of the solver is described and future developments are addressed. In the second part of the talk we will show how difficult it is to produce meaningful computational benchmarking results when comparing sophisticated heuristic algorithms.
